

DETAILED SCOPE OF WORK

Addendum to RFP

VIYA 2.0 App and Website

Here is a detailed statement of Work which needs to be read in conjunction with the high-level scope outlined in the RFP. Ensure compliance to this and resubmit the technical and commercial submissions.

Note: Do not include or amend any changes to the description column. Add only in remarks column.

1. INTRODUCTION:

Dubai Golf (LLC) is one of the leading golf and leisure management companies in the UAE, operating some of the region's most iconic golf destinations. Established as part of wasl Asset Management Group, Dubai Golf manages world-class golf clubs, luxury leisure facilities, and entertainment venues in Dubai.

Their portfolio includes Emirates Golf Club, Dubai Creek Golf & Yacht Club, Jumeirah Golf Estates, Topgolf Dubai in Dubai and Yas Links, Yas Acres, Saadiyat Beach Golf Club in Abu Dhabi— all renowned for delivering premium golfing experiences, fine dining, leisure activities, and event spaces. Beyond golf, Dubai Golf has expanded into lifestyle and sports ventures, such as Viya (a loyalty and booking platform), Viya Padel, Viya Fit, Viya Marine and Tiger Strikes. Additionally, Dubai Golf also owns Sausage Kitchen, a leading food manufacturing and distribution companies in the UAE, supplying a wide range of products to over 280 hotels and restaurants.

The company is recognized not only for its championship golf courses but also for innovation in sports entertainment, hospitality, F&B retail, and community engagement within the UAE's leisure and tourism sector.

2. Project Objective:

Dubai Golf is embarking on a comprehensive digital transformation journey aimed at reimagining and modernizing all of its digital assets — including its websites and its lifestyle, loyalty, and services app, Viya. A central focus of this transformation is the unification and rebranding of all Dubai Golf offerings under the single, cohesive brand identity of Viya. This strategic move is designed to bring together the diverse experiences of Dubai Golf — spanning golf, dining, leisure, retail, and hospitality — into a seamless, user-centric digital ecosystem.

The transformation seeks to centralize customer engagement, simplify access to Dubai Golf's full portfolio of products and services, and deliver a superior digital experience that strengthens brand visibility, user engagement, and customer loyalty.

Additionally, the Viya mobile app will undergo a significant evolution both frontend and backend—transitioning from its current native architecture to a next-generation hybrid framework. This shift will enable faster development cycles, improved scalability, and readiness for future ambitions, including super-app functionality and international expansion.

Generic Objectives of the Digital Transformation Project:

- **Unified Digital Ecosystem**

Integrate all Dubai Golf digital assets — including Viya, property websites, e-commerce platforms, and service portals — into a single, centrally managed and brand-consistent platform.

- **Scalable, Cloud-Native Infrastructure**

Leverage cloud technologies to ensure operational scalability, reliability, and readiness for regional and international market expansion.

- **Technology Modernization**

Transition to a modern, modular technology stack utilizing microservices, API-first architecture, CI/CD pipelines, and advanced data management capabilities.

- **Enhanced User Experience & Personalization**

Deliver highly personalized digital journeys with an intuitive UI/UX, dynamic content, and tailored loyalty experiences that drive deeper engagement.

- **Super-App Evolution**

Transform Viya into a multi-service, “super-app” platform capable of integrating additional Dubai Golf services, third-party partnerships, and regional/international offerings.

- **Self-Service Capabilities**

Empower users and partners with comprehensive self-service tools for managing bookings, rewards, memberships, payments, and profile management.

- **Data-Driven Decision Making**

Implement robust analytics, reporting dashboards, and customer insights platforms to enable real-time data-driven strategies and continuous optimization.

- **Compliance, Security & Privacy**

Ensure strict adherence to global and regional regulations including GDPR, WCAG accessibility standards, and UAE data protection laws, supported by industry-leading security frameworks.

- **Product Innovation**

Build an agile digital foundation capable of providing services through emerging technologies such as AI- driven booking experiences, behavior and machine learning- driven personalization and seamless integration of advanced payment solutions with advance rewards capability.

- **Platform Consistency**

Provide users with a seamless and consistent experience across all touchpoints — mobile, web, on-property, and offline — driving increased engagement and retention.

- **Operational Efficiency & Automation**

Streamline internal processes with backend automation, centralized content management, and integration with CRM, ERP, and other business systems to improve operational efficiency.

3. SCOPE OF WORK:

Product Deliverables:

1. Android and iOS Viya Customer App
2. Android and iOS Viya Partner App (+ Pax Build)
3. Websites (Viya.com, Wikit, Top Golf, Sausage Kitchen, Viya Marine, Viyagolfholidays)
4. Viya Backend Portal

The following sections will list the scope of work broken down by functional requirements for the above deliverables.

a. Scope for Viya 2.0 Mobile application

ID	Description (Existing- E, New-N)	Comments
VMA_1	Pre-registration (Frontend) • Customers should be able to explore the full app, but not able to do any transactions. • Transactions will be possible only post registration and successful login. Registration (Frontend): • The application must support user registration via form submission and social media platforms. • All registration pathways should adhere to data privacy and security best practices. • Onboarding screens should be customizable as per region. Form-Based Registration:	

	• The registration form should include the essential fields such as but not limited to: ▪ Country Code (Pre-populated based on device location, with manual override option) ▪ Contact Number (Required, with country code selection and numeric validation), Mandatory and unique user identifier. ▪ Email ID – Mandatory ▪ Name – Mandatory • A field to enter the referral code should be provided. If a customer is coming from a referral link, the referral code should be prepopulated. • Accept "Terms & Conditions" and "Privacy Policy" (Required, with link to full document) • Upon form submission, an OTP (One-Time Password) should be generated and sent to the registered mobile number Social Media Registration: ▪ The application should support registration through Google Accounts, Facebook, Twitter, Apple ID etc. Upon social media account selection: ▪ The application should capture the user's First Name, Last Name, Email Address, and Profile Picture (if available) from the social media profile. ▪ If a phone number and email are not available from the social media profile, the user must be prompted to enter a phone number & email and verify it with an OTP to complete the registration. ▪ If phone number and email are available, then send OTP for validation Post-Registration Setup: After successful registration: ▪ The application should prompt the user to set up a six-digit PIN or a biometric logon for a faster and seamless login.	
--	---	--

	▪ The application should provide clear instructions for setting up the PIN. ▪ The application should provide clear instructions for setting up biometric login. ▪ A unique "Viya ID" should be generated and stored upon successful registration. Pre-Registrations (Backend): ▪ The backend application should provide an option to perform pre-registration for Viya user accounts via API and File upload. ▪ The form should include the same fields as the online registration form with mobile number and email as the unique identifier. ▪ Upon first login, the application should prompt the user to validate the mobile number and create their PIN or a biometric login. Registration (Backend): ▪ There needs to be a provision for addressing cases where mobile numbers are re-assigned to a completely new person. The mobile number needs to be removed from the existing account however its transaction history needs to be maintained. ▪ The system should handle duplicate registration attempts and provide informative error messages. ▪ The backend should store the additional information of registration, such as source, device ID, OS, Platform, social media, and other useful meta data. ▪ The backend should store the active session and matching device information. ▪ The backend should log all registration attempts and successful registrations. ▪ The backend should have a mechanism to reset PIN, resend OTP's, enable and disable accounts. ▪ The backend should have an audit trail of changes to user accounts.	
--	--	--

	Provision to change customer mobile and email address from backend	
VMA_2	Login (Frontend): - Implement a secure and user-friendly login system offering multiple authentication methods such as PIN, Biometric and OTP. - Enhance security by restricting concurrent logins. - Configurable Auto logout after a pre-defined duration. - We need to have steps to encourage customer provide certain app permissions such as location sharing, Notifications, contact access, Image gallery etc. How often we show these should be configurable. - On first log-in there should a tour / orientation / tutorial. Customer should be able to visit this at any time in the future. - Require users to accept terms and conditions and privacy policy during registration. - Provide clear and informative error messages during login and recovery processes. - Remember Me Functionality: Users login details are prepopulated. Login Methods: - Mobile Number & Six-Digit PIN Login - Social Media Login - Biometric Login - OTP Login (Registered Contact Number or e-mail) Forgot PIN Process: - Implement a "Forgot PIN" option on the login screen. - Generate and send an OTP to the user's registered mobile number and email. - After successful OTP validation, prompt the user to enter and confirm a new six-digit PIN. Security Measures: - Implement security measures to prevent brute-force attacks and unauthorized PIN resets and registration - Option to enable 2FA for enhanced security. User Notification:	

	• Notify the user about the concurrent login and the device that was logged out. PIN Strength Indicator: ▪ Visual indication of password/PIN complexity during creation and reset. Account Lockout: ▪ Implement account lockout after multiple failed login attempts. show appropriate message to the user. Auto unlock account after a preset duration and provision to unlock from the backend. ▪ Accounts that have been locked due to exceeding the defined number of failed login attempts will be blocked and need to be unlocked manually from backend. Login History: (Backend) ▪ Display a history of successful and unsuccessful login attempts and devices. ▪ Provision to view OTPs that have been triggered/sent to the customer. Account Deletion: ▪ Functionality for users to request deletion of their account.	
VMA_3	Golf Tee Time Booking: User Types and Access: • The system must provide a seamless and enhanced tee-time booking journey for both registered members and non-members. • Support for dynamic pricing for various user types on the app. • Ability to filter Tee-Times by club, course, date and time, Price, Location, holes and player configuration, etc. • Customers / Members should have access to exclusive booking windows, rates, coupon/offer/privileges, pay later, and booking extensions. • Enable Waitlist functionality for both peak and off-peak timings. • Non-members should be able to register and book tee times with their respective pricing and access. • Support for golf slot yield management. Player Variations:	

	• The system should accommodate bookings for fellow players per tee time, with clear limitations based on the golf course's policies. • Support for adding Buddy's/Friends to the booking. • The system should support individual bookings and group bookings. • System should allow user to select appropriate player types (Viya Rate, Junior rate, EGF rate etc.) during the booking journey. Time-Based Pricing and Availability: • The system must differentiate between Peak and Off-Peak timing, adjusting pricing and availability based on these periods. • Real-time availability of tee times should be displayed. Add-Ons: • The system should allow users to add optional add-ons to their bookings and pay (if applicable), such as: ▪ Golf cart rentals ▪ Club rentals ▪ Practice range balls ▪ Shoe rental ▪ And more Federation Fees: • Federation fees and applicability should be configurable. • The system must accurately calculate and include any applicable federation fees during the booking process for the selected players to choose. • Fee breakdowns should be transparent and easily accessible to the user. Driving Range Reservations: • Enable reservation / check-in functionality for the driving range.	
--	---	--

	Golf Backend: • Integrate with existing Tee sheet platforms (Concept/Viya Tee sheet) Clubs/Courses for tee times. • Capability to configure various Regions, Clubs, Brands, Outlets. • Support for managing different Customer Types and Sub Types for App/Web. • Capability to manage varying Conditions of Play for App/Web. • Capability to manage varying Courses for App/Web. • Capability to manage varying Player Type for App/Web. • Capability to manage varying Cancel Reasons for Membership, Bookings. This should be specific to backend and App/Web cancellation. • Capability to manage varying offers to specific courses Tee-Times. • Capability to View all Online transactions of App/Web including guest transaction. • Cancel (Full/Partial) booking from the backend for automatic refund in accordance with cancellation and refund policy. • Capability to Add/Modify all the necessary fields available in the backend with the audit logs. • Capability to Add/Modify or Consume golf federation Fees, Add-Ons.	
VMA_4	Packages Functionality: Provide seamless experience for purchasing packages, booking lessons, and managing packages and lessons/group/scheduled package bookings. This should be configurable in a way to support various types of Packages such as: - Golf - DIne - Top Golf - Padel - Fitness and Wellness	

	- Daycations / Staycations sports Package Purchase: • Capability to view the respective package details. • Offer packages tailored to Individual, Group, Adult, Junior, and Shared learning or any package types. • Ability to filter packages by category, club, venue, date, eligibility, gender, skill level, age group, and player configuration, etc. Depending on the nature of the packages. • Keyword search functionality. • Offer configurable package purchase flows e.g. Design the package purchase journey based on the purchase category. If the package includes only one lesson booking, both the purchase and the lesson booking should be completed in a single flow. Otherwise, the system should allow users to purchase the package first, with lesson bookings to be made at a later time. • Show relevant instructor information where applicable based on the context of the package or lesson. • Show relevant Terms and Conditions for the selected packages. • If applicable, allow purchasers to select the recipients for the packages. • Provide options to the user to choose bulk lesson booking options on preferred calendar days during package purchase journey. • Allow for package specific variations within each business type. • Package pricing may be provided by the backend system or through the API integrations. • Package usage, lesson status etc. Should be clearly mentioned against each of the packages. Package Lesson Booking: • Allow user to book lesson(s) against package purchased • System to consider capacity, waiting lists, and bookings.	
--	--	--

	• Send confirmations and reminders as applicable. • Ability to tag scores / performance parameters / notes by the coaches after every session. • Ability to communicate with the coach once the lesson is booked with a coach. • Display additional information Usages, package validity, lesson status etc. Integration: • The system must be able to integrate with source systems such as Concept, Viya Parter Portal for the respective packages and lesson booking. • The system should be able to integrate with 3rd party systems as well for e.g. Viya Fit Mina Sehayi Club management system. Package Configurations (Backend): • Ability to configure various types of packages within the backend portal using parameters such as Outlets, package types (single, group etc.), coaches, time and capacity restrictions etc. • The system should allow configurations for users to buy optional add-ons to their bookings and pay (if applicable). • Capability to configure varying Cancel Reasons when cancelling Package purchase, Bookings. This should be specific to backend and App cancellation. • Ability to configure cancellation and refund policies at a package level. • Capability to configure messaging for various outlet maintenance. • Capability to View all transactions in the system that include package purchase and lesson bookings. • Allow backend cancellation for the Package purchase and initiate automatic refund in accordance with cancellation and refund policy. • Allow backend cancellation for the lesson booking in accordance with cancellation policy.	
--	--	--

	• Capability to Add/Modify all the necessary fields available in the backend with the audit logs.	
VMA_5	Tournaments: Provide a seamless tournament signups experience for various sports (Golf, Padel, Tennis, Fitness, Football, Topgolf etc.), considering clubs, venues, eligibility, gender, skill levels, player configurations, and age groups. Tournament Sign-up (Club/Venue Specific): • Show Tournaments listing. • Offer tournaments tailored to various sports (Golf, Padel, Tennis, Fitness, Football, Topgolf, etc.), considering eligibility, gender, skill levels, player configurations, and age groups, sport-specific fields, data requirements etc. • Ability to filter tournaments by club, venue, date, eligibility, gender, skill level, age group, player configuration etc. • Keyword search functionality. • Display comprehensive tournament information. • Ability to sign-up as individual or teams. Team compositions should be configurable. • Allow users to select /enter the participants for the selected Tournament. • Ability to offer variable tournament fees based on user profile categories, such as different pricing for Members and Non-Members. • Allow user to view more details about Tournament (Flyer/other marketing material) Integration: • The system must be able to source directly from the Viya backend portal as well as integrate with other Tournament Management system (Like Concept, Viya Parter Portal).	

	Tournament Backend Management: • Capability to create, configure and manage various Tournaments. • Capability to configure and control tournament registration cut-off dates and capacity limits. Capability to define and manage multiple cancellation reasons, tailored separately for backend and app-based cancellations, to list a few. • The backend should have the capability to create different workflows for cancellations. these workflows should include triggered communications, refunds, internal and external notifications etc. • Capability to View all transactions in the system. • Capability to export all registration in various customizable formats. • Allow backend cancellation for the Tournament bookings and initiate automatic refund in accordance with cancellation and refund policy. • Capability to Add/Modify all the related fields available in the backend.	
VMA_6	Online Retail: Developing a comprehensive retail online store, providing a seamless shopping experience for customers across various Sports such as Golf, Padel, Tennis, Football, Fitness, Topgolf, Viya Marine etc. Front End Experience: • Display detailed product information (images, descriptions, specifications, pricing, availability etc.). • Categorize products by type (Gender, clubs, apparel, accessories, etc.), brand, and other relevant attributes. • Implement product filtering and sorting options. • Social media sharing buttons. • Robust search functionality with keyword suggestions and filtering. • Real-time order tracking and status updates.	

	• Order history and details. • Deep Linking to respective hierarchy and item level pages • Exchange functionality, if applicable. • Return functionality, if applicable. • Add, remove, and update items in the shopping cart. • Display cart summary and estimated total. • Enable customers to leave product reviews and ratings. Order Cancellation: • The system should allow for Full and Partial cancellations, adhering to the cancellation policy. • All remaining standard cancellation and communication policies will apply. • All remaining standard refund and communication policies will apply. Backend Management: • Provide the ability to integrate with partner systems (like Pro Sports). • Capability to view and manage orders. • Allow backend cancellation and return, and initiate an automatic refund in accordance with cancellation, return and refund policy. • All generic cancellation and communication policies will apply. • Capability to Add/Modify all the necessary fields available in the backend. • Display average ratings and review summaries.	
VMA_7	Access Pass Access Pass is a premium lifestyle membership product of Viya that offers access to a wide range of amenities including gyms, pools, beaches and entertainment venues. It is designed for individuals, couples and families seeking a comprehensive leisure experience.	

	• Access pass option in the app enables users to view the various access passes, see the details of it, purchase, manage, and utilize the digital passes and associated coupons/offers benefits for various facilities within the business function (Golf/Padel/Dine/Leisure/Fitness/Marine/Topgolf, etc.). • In the detailed view of the individual pass, associated access pass details, conditions of usage, facilities details, pricing etc. need to be shown • Ability to share the link with others – social sharing etc. • Support for various access pass subscriptions (e.g., daily, weekly, monthly, annual, specific date and time). • Varying pricing for the respective pass frequency selection. • Ability to view the access pass validity and usage limit. • User-friendly interface for browsing and selecting and purchasing the access passes and add-ons. • Generic Purchase related functionality will apply for the access pass purchase journey • A referral program specifically for Access Passes to be implemented. Track referrals and apply extension benefits. • Ability to configure restriction on access in terms of no. of usages, timings, restriction based on certain customer profiles or other pre-defined parameters etc. • Ability to collect payments for additional guest access through the app. • Ability for semi-paid benefits / top up of benefits, after a certain usage is over. • A unified QR code will represent the user and associated products (multiple access features: by the user. • Partners have a provision to add advisories which will be listed within access pass in a prominent way for better customer experience • Post check-in, the venue benefits, promotions, offers, special notes have to be showcased to the user for better user engagement and information • Ability to sell day passes for the partners.	
--	--	--

	• Ability to purchase multiple products in one transaction • Ability to upgrade to higher value passes. The system should be able to calculate the difference amount for the upgrade. Once payment is done, old pass needs to be removed and the new pass needs to be triggered, Check-In/Out Scanning: • Partner app for scanning Unified QR code • Integration with facility access control systems (Optional) • Real-time check-in/check-out tracking. • Capability for user to force check-out. • Auto check-out based on proximity of the venue. • Photo capture of the person checking in. • Ability to pre-book / pre-approve access from the partner (applicable during busy periods) - notification gets sent to the partner app and other channels – acceptance / rejection from partner – adding to the waitlist – status update etc. Associated journey on the partner app needs to be added as well. This is an optional and configurable step. • Ability to configure limitation on check-ins • Trigger communications at check-in and check-out -> Email, Push etc. Family Sharing: • Allow users to share access passes with family members. • Manage family member access and permissions. • Ability to add family members for children who do not have independent accounts or mobile phones. Fraud Management: • Pass should be locked to a particular device, once triggered or shared. Management of requests in case of change in hardware needs to be done through CS and required tools needs to be provided in the backend portal.	
--	---	--

	• Making the picture mandatory for check-in. Picture once uploaded cannot be changed during the validity of the pass. This picture should be available to the partner to view as well. • To include any additional Fraud monitoring mechanisms Backend Management: • Manage facility access control system integration • Ability to create, edit, and delete access passes. • Define frequency options, pricing, usage limit, validity, purchase type, Visits, Applicability and other necessary details. • Capability to associate varying Outlets, Courses, Clubs, etc. • Allow backend cancellation, and initiate an automatic refund in accordance with cancellation, return and refund policy. • Real-time view of the check-ins and capacity available. • Capability to configure triggered comms to customers, partners etc. (configurable and optional) • Ability to provide the next best options in a vicinity, in case a facility is full or not accepting customers. • Ability to suggest the best times to visit – based on the previous check-in data.	
VMA_8	Generic Booking Functionality This section applies to all types of bookings available across app. and websites, such as • Golf Booking • Padel Bookings • Court Bookings (Padel, tennis, Squash etc.) • Academy Lesson booking (except bookings under package purchases) • Event Bookings • Table Bookings (Reservation + payments) • Golf Simulator • Bay Bookings (Wikit, Tiger Strikes, Five Iron, Dart, Bowling etc.)	

	• Yacht Bookings • Any other bookable entity. This section also covers the specific requirements for Padel. Specific requirements for other types of bookings are covered under relevant sections of this document. Generic Requirements: • Ability to define various outlets that allow the above types of bookings. • Ability to define the bookable inventory either directly or through API. • Pricing configurations and it's variations across different customer types, time slots, etc. • Ability to define dynamic pricing for various bookable slots. • Cancellation and modification policies should be configurable across various booking types and their variations, if variations. • Enabling Loyalty earning / redemption should be configurable across various booking types and their variations, if variations. • All other generic requirements of payment, communication, reporting etc. as mentioned in VMA_20 applicable. Padel Booking Requirements: Provide the ability for the users to browse various outlets to create a match, join a match, book a court, register for a tournament or join an activity. Padel Tennis Booking Types: Support for various types as below and applicable, but not limited to: • Open (public) matches. • Private matches (invite-only). • Matches for friends only. • Social matches (organized group play). • Play with a coach. • Battle of coaches. • Court Booking. Booking Journey (Frontend) :	
--	--	--

	• Display venue and associated inventory information such as pricing, timings etc. • Allow users to select, book and pay a slot. Applies to different match types as applicable. • Ability to invite friends to book. • All generic communications and cancellations / refund requirements apply. • Search and filter matches based on various criteria (club, Type of match, time, level, distance etc.). • Control match visibility (public, private, friends only). • Option to send invitations (email/push) for private matches. User Profiles and Social Features: • User profile attributes such as player level, best hand, contact information, and social connections. • Manage friend lists for easy match invitations. • Create and join social groups. • Organize social matches and events. • Rate and review activity and coaches. Integration: • The system must be able to integrate with platforms such as Concept, Viya Parter Portal etc. Recreational Sports (Backend) • Capability to configure and manage varying Clubs, brands, Outlets, Courts, Pricing (Member, Non-Members), match type, gender, match duration (30, 60, 90 etc.), payment and cancellation rules, description and notes, skill level, other details. • Capability to create and manage varying match types for different activities, select date range (sequence or random), varying levels, courts, coach's, gender, slot activation for members and non-member.	
--	---	--

	• Manage coach profiles and availability. • View and manage all matches. • Monitor match activity and attendance. • Slot Activation, Member “X” days before the play date, Non-Member “X” days before the play date. Match should be displayed to the customer on the app based on this configuration. If this is configured as null or empty or 0 then show the slot immediately to the customer on the app for the respective date(s). • Capability to enable/disable the matches created and all related configurations. • Capability to configure and manage skill levels/rating, Player Ranking. • Capability to configure varying Cancel Reasons for Bookings. This should be specific to backend and App/Web cancellation. • Capability to configure varying Maintenance messages. • Capability to View all transactions. • Cancel booking from the backend for automatic refund in accordance to cancellation and refund policy. • Player level requirements (beginner (D), intermediate (D+), advanced (A), etc.). • Option to invite fellow players (For Friends Only, Private Match).	
VMA_9	Magazines: • Option to display various magazines within the app, enabling users to access the content seamlessly. Option to display and navigate through the magazines via url within web-view as in current implementation and also to consider additional option to upload via backend and display/navigate in the app natively. • Associated analytics should be included. - clicks, time spent on various sections etc. This information should be stored and available for segmentation / targeting.	

VMA_10	Core Loyalty Engine Integration: ▪ Establish seamless and reliable integration with the loyalty engine via API. ▪ Ensure data synchronization for user profile, points, tiers, and transactions. ▪ Enabling points earning and redemption for website journeys and purchases should be configurable. The loyalty rules will be configured in LMS. Points Earning: ▪ Implement base points earning for all eligible transactions across all Viya business functions (e.g., Golf, Padel, Dine-in, Retail etc.) and user types (Member, Non-member, Tenant etc.). ▪ Rules for base points accrual based on transaction value or other criteria will be managed at the LMS. Support for region-specific loyalty program rules and regulations will be managed in LMS. Points Redemption: ▪ Enable users to redeem loyalty points for payments across all Viya business functions. ▪ Provide clear redemption options and point-to-currency conversion rates. ▪ Allow for partial point redemption combined with other payment methods in user journeys. Loyalty Points Synchronization: ▪ Ensure real-time synchronization of loyalty points across the platform ▪ Prevent discrepancies and ensure accurate point balances. Loyalty Tiers and Benefits: Tier System:	

	▪ Tier configuration and associated benefits will be defined and maintained in the LMS ▪ Display clear user tier status within the app. ▪ Use gamification for showing progress / achievement to the next tier. (addressing upgrade and downgrades) Cross-Border Loyalty Management: Multi-Currency Support: ▪ Enable loyalty point earning and redemption across different currencies and regions. ▪ Implement currency conversion for point values. Option to use dynamic or have provision to use fixed conversion Regional Rules and Regulations: ▪ Compliance with data privacy and security requirements in different jurisdictions. ▪ Loyalty Transaction History and Reporting: Transaction History: ▪ Provide users with a detailed history of loyalty point earnings, redemptions and points expiry. ▪ Display transaction details, including date, time, and points earned/redeemed. ▪ Create and manage bonus point campaigns and promotional offers.	
VMA_11	Food and Beverage: A comprehensive food and beverage (F&B) ordering system catering to integrated and non-integrated outlets, incorporating dine-in, delivery, pickup, and offer management. The feature to support in-app as well as web journey. The journeys can be initiated directly on the app as well as via QR code. Dine-In Ordering (Integrated & Non-Integrated):	

	• Digital menu access with detailed product descriptions via app, QR code, or web interface. • Option to choose variants, add-ons, quantity, condiments, preferences against menu items • Table assignment and Order management with status tracking via app or web. • Ability for additional users to join existing table • Checkout option with ability to Split Bill equally, custom amount or by item-wise with service charge calculation. • Guest Checkout option for Web • Ability to apply applicable discounts, coupons, vouchers and give custom tips and use loyalty points during checkout • Ability for order management through Viya App for customer, POS (Interface or Integrated tablet) and Partner App for outlet • Ability to add special instructions. • Necessary order related communication (email, sms, push notification) to be dispatched • Call waiter functionality • Ability review past orders, rate the order and provide feedback Scheduled Delivery and Pickup (Integrated & Non-Integrated): • Check and prompt Delivery Feasibility. Option to re-use saved user delivery locations • Digital menu access with detailed product descriptions via app, QR code, or web interface. • Option to choose variants, add-ons, quantity, condiments, preferences against menu items • Ability to place, schedule delivery/pickup and manage the order.	
--	---	--

	• Checkout with option to add tip (before or after), apply discounts, vouchers, coupons and loyalty points, schedule pickup or delivery, make advance payment • Integration with delivery management systems to pass on order, and other related information • Real-time delivery/pickup tracking notifications and status updates. • Ability to communicate with delivery or outlet personnel • Option to cancel until order confirmed • Necessary order related communication (email, push notification) to be dispatched for example when order is ready for pickup or when order is out for delivery etc. • Ability review past orders, rate the order and provide feedback Delivery Personnel interface: • Receive Delivery Notifications and Accept orders • Route optimization and navigation for Delivery. • Order status updates and delivery status confirmation. • Customer communications. • Real-time Location tracking Integration: • POS system integration. • Delivery management system integration. • Payment gateway integration. • CRM and marketing platform integration. Backend: • Capability to configure and manage Brands, Outlets, other details. • Capability to configure varying Void and Cancel Reasons for transactions. This should be specific to backend and App/Web cancellation.	
--	--	--

	• Capability to configure varying outlet Maintenance message for App/Web. • Capability to view all transactions of App/Web including guest transactions. • Cancel/Void from the backend for automatic refund in accordance with cancellation and refund policy. • Capability to Add/Modify all the necessary fields available in the backend with the audit logs. • Real time order tracking • Manual delivery personnel assignment Menu Management: • Ability to provide meta information with integrated outlets. • Full Item creation and management for non-integrated outlets • Ability to add item properties such as item descriptions, main ingredients, calorie counts, allergens, item portion (S, M, L), and categorization for improved navigation (e.g., Food, Beverage, Tobacco, Retail, Starter, Main Course, Breakfast, etc.), item image etc. • Ability to configure the series of sub-items for respective item such as Variants, Add-ons, Preferences, Notes etc. • Ability to configure multiple menus for all order type (Dine in, Pickup and Schedule delivery) • Option to manage the display of these menus and control menu availability times. Per item • All delivery management related configuration. • Support configurable item order capacity per day and per hour. • System should be capable of running scheduled tasks in the background to sync menu items with integrated POS or manual sync on demand. • Admins should be able to configure the maximum number of Orders that can be accepted per day/hour on Product level.	
--	--	--

	• Admin should be able to manage the inventory of items and control the number of orders that can be accepted each hour/day. Also, the sorting/displaying order of the items should be configurable/Manageable. • For quality assurance, the administrator should be able to preview or simulate the menu before it is published for end users. • Admin should have access to create promo code per order category. • System should have the capability to enable or disable monitoring/approval of orders before they are sent to Micros POS. (Backend + Partner App) • The system should send an email to the user informing them of the order status (For pickup and delivery). • When an order is rejected, the store manager should be able to enter a reason for the rejection(configurable). System should then initiate a full refund based on the order type and send an email confirmation to the user, informing them of the order and refund status. • If it is a partial item rejection, then this needs to be handled. • TAT for accepting the order should be configurable Partner App • Store managers should have access to view all incoming orders and the ability to accept or reject entire orders or partially reject specific items when necessary (with reason logging for rejections). This needs to be configurable as an optional workflow at the outlet level. • View detailed order information (Dine, Pickup, scheduled delivery) • Update the status of each order in real-time. Trigger updates to customer app via push or in-app notifications (e.g., order accepted, out for delivery) Order Management: • Real-time order tracking and management. • Order status updates and notifications. • Refund and cancellation processing.	
--	---	--

VMA_12	App Layout and Landing Screens: Create dedicated App Landing screens for various business functions including main app landing screen and hero sections that incorporates promotional banners (carousels, images and video banners etc.) with optional detail screens, function shortcuts, featured products and offers, dynamic personalized recommendations etc. These sections and are subject to inclusion of other elements as proposed in design. The backend CMS should provide all options to customize and configure such elements. Additional App Layout Information, Tab Bar and other design considerations will be discussed during the design discovery.	
VMA_13	Enhanced Membership Management System: Implementing a comprehensive and customizable membership management system across various business functions within the Viya app, including signup, hold, cancellation, and renewal. Applicable to different products such as Access Pass, Gym Membership, Golf Membership, Padel, Topgolf, Leisure Membership etc. Customizable Membership Signup: Discovery: • Ability to see images and videos relating to the membership product, for example 3D interactive videos of the golf course and every hole of the course. • Provide details of the various membership packages and the associated benefits and pricing. • Option to book a tour or seek additional information • Integration with lead management systems	

	Online Signup: • Implement a user-friendly online signup process within the Viya app and web. • Allow users to select membership types, durations, and payment options. • Capture necessary user information for membership enrollment. • Option to digitally sign waivers, upload documents etc. • Integrate with payment gateways for secure online payments. • Show the progress of the application and sign-up process. Applicable for non-instant signup type memberships • Provide instant membership confirmation upon successful signup. Applicable for instant signup type memberships Membership Management: Membership Hold: • Allow members to place their memberships on hold for a specified period (optional and configurable). This could also be a paid feature • Define rules for hold duration and frequency. • Automatically resume memberships after the hold period. Membership Cancellation: • Implement a clear and user-friendly cancellation process. • Define cancellation policies and refund rules. • Provide cancellation confirmation and notifications. Membership Renewal: • Implement automated membership renewal reminders and notifications. • Provide various renewal options (e.g., auto-renewal, manual renewal). • Integrate with payment gateways for seamless renewal payments. • Offer renewal discounts or incentives. Membership Transfer: • Allow members to transfer memberships to another user (subject to defined rules). Membership Upgrades/Downgrades:	
--	---	--

	• Allow members to upgrade or downgrade their membership tiers. • Calculate pro-rated fees and adjustments.	
VMA_14	Booking and Reservation Systems: A comprehensive reservation system within the Viya app, catering to a wide range of services and integrating with both in-house and third-party systems. Reservation Types and Integration: Diverse Reservation Categories: • Support for reservations across all specified categories: Golf, Padel, Leisure, Fitness (In-house & Third-Party), Dine-in, Topgolf various venues (Bay, Group, Events, Parties), Marine, Wikit, Bowling, Dart, Five Iron, Viya Connect (Pros, Celebrities), Other Events. In-House Outlet Integration: • Seamless integration with in-house outlet systems for real-time availability and booking. (Concept, Viya Partner Portal etc.) • Synchronization of reservation data across platforms. • Management of availability, pricing and bookings. Third-Party Integration: • API integrations with third-party systems such as Five Iron, Sevenrooms, Yalago, Priohub and similar GDS systems such as Amadeus, Galileo, Sabre etc.). • Handling of varied data formats and authentication methods for different third-party integrations. • Management of third-party location availability, pricing and bookings. User Reservation Management: Booking / Reservation Creation:	

	• User-friendly interface for browsing and selecting reservation options. • Ability to specify date, time, duration, and number of participants. • Capture of necessary user information for each reservation type. • Display of real-time availability and pricing, if applicable • Make Reservation and pay, if needed. Booking / Reservation Management: • View upcoming and past reservations. • Manage upcoming reservations. • Ability to modify reservation details (e.g., time, date, participants) subject to the applicable modification policy • Ability to cancel reservations subject to the applicable cancellation policy. • Display of reservation confirmations and reminders. • Modification Restrictions, Charges to apply as per policy, if any. • All necessary communications apply. Booking Hold : • Ability to hold reservations for a specified period (e.g., pending payment). • Automated release of held reservations if not confirmed within the hold period. • Waitlist functionality. Reservation Options on the App : The following section outlines the various reservation systems needed within the VIYA App. This is to consolidate all reservation options within the app. More information on these reservation types can be found in the respective sections. • Golf Reservations (VMA_3) • Padel Reservations (VMA_8) • Leisure & Marine (VMA_23) • Dine Table Reservations (VMA_25) • Events Reservations (VMA_30)	
--	--	--

	• Topgolf Reservations (VMA_26) • Wikit Reservations (VMA_27) • Bowling Reservations (VMA_27) • Dart Reservations (VMA_27) • Top Tracer Reservations (VMA_28) • Fitness Reservations (VMA_29) • Viya Connect Reservations (VMA_24) • Viya Marine Reservations (VMA_23)	
VMA_15	Subscription Management System: Implementing a robust subscription management system within the Viya app, encompassing various business products and services. Use existing solutions in the market such as stripe to manage the core subscription functionality and relay the configurations into the Viya backend over api's. Subscription on the App ▪ Implement an option to enable/disable recurring payments for access passes, academy packages, vouchers (F&B, Golf, Leisure, Fitness, padel match pack, etc.), and other eligible products/services. ▪ Set recurring payments as the default option during checkout. However, this needs to be configurable at the product/services level. ▪ Allow users to disable recurring payments with clear confirmation prompts. ▪ Display comprehensive information about recurring payments, including billing cycles, amounts, and subscription terms. ▪ Provide clear content and explanations within pop-up messages. ▪ Activate recurring payments based on the expiration date of the product/service or upon final usage of the access pass (if applicable).	

	▪ Ensure activation occurs only if the user has opted for recurring payments. ▪ Develop a process to migrate existing products and services to the subscription model. ▪ Ensure data integrity and seamless transition for existing users. ▪ Allow users to update or modify their subscriptions at the end of each billing cycle (e.g., change package, upgrade/downgrade). ▪ Support trial periods for subscriptions, with charges applied after the trial ends. ▪ Allow users to pay now and schedule the subscription start date for access passes or other eligible items. ▪ Enable users to pause their subscriptions for a specified duration (paid or unpaid). ▪ Define rules for pause duration and frequency. ▪ Provide a clear and user-friendly subscription cancellation process adhering to the cancellation policy. ▪ Implement cancellation confirmation and notifications. ▪ Implement automated payment retry mechanisms for failed transactions (stripe). ▪ Notify users of failed payments and provide options to update payment information. ▪ Enable administrators to issue refunds for subscription payments. ▪ Automate refund calculations and processing where possible adhering to the refund policy. ▪ Allow triggered communication across various touchpoints Payment Management: ▪ Allow users to add, delete, and set default payment methods. ▪ Securely store and manage payment information.	
--	---	--

	- Implement mechanisms to reduce friction and business impact associated with card expirations (e.g., automatic updates, proactive reminders). Backend Portal: - API Integration with service provider (like Stripe) to bring all subscriptions related configurations, reporting, settings and controls in the Viya Backend. Payment Links - Generate payment links that support recurring payments. - Allow for easy sharing of payment links	
VMA_16	User Profile Management : The Viya customer app, partner app and website, as applicable, should enable users to effectively manage their personal profiles. This includes but is not limited to: 1. Manage Notifications, Language and Localization Preferences and related settings 2. Option to Change PIN, enroll biometrics and Profile Information 3. Option to see and manage Player profile preferences (such as padel) 4. Option to see and manage car information (add/remove vehicle details) 5. Show Transactions – covering all Viya transactions, reservations and bookings 6. See and Manage Users Passes and Vouchers 7. See and Manage Users Payment Methods 8. See and Manage Users Memberships and Renewals (Both DG and non-DG),	

	9. Member Zone Section that includes apply for Membership, Memberships Information, Member Benefits, Member SOA's, Member Bulletin Boards, Member Special messages, MCC Team and Feedback, Colleague Appreciation Nomination Etc. also refer VWB_4 10. See Tenancy Information as applicable 11. Option to delete Viya Account 12. In addition to this, existing sections such as About Us, FAQs, Contact Us should be available for the users. The configuration and management of the same to be available in the backend 13. My Rewards • Ability for the customers to hold multiple profiles and its associated management should be available. The backend should also allow benefits and privileges management. • Display clear membership status (active, hold, canceled, expired) within the user profile. • Implement access control based on membership status and tier. • Generate and provide membership cards or digital passes for access verification with an option to add to apple, samsung, google wallet etc.	
VMA_17	Communications All communications within Viya can be broadly classified as Transactional Communications and Marketing Communications. Transactional Communications includes communication to Customers and Partners. This section applies to both app and web. Transactional Communications: • All transactional events across consumer, partner app and backend should be supported with appropriate communication delivered through various channels.	

	• Select non-transactional events such as profile update, sharing of pass etc. should be supported with appropriate communication delivered through various channels. • Implement a templating system for creating and managing notification content. • Support dynamic content insertion based on user data, transaction details, and event information. • All triggered communications should the relevant app or deep links for ease of navigation. • Allow administrators to schedule notifications for future delivery. • Implement time-based and event-based notification triggers. • Log all sent notifications, including delivery status, timestamps, and user interactions. • Provide reporting and analytics on notification delivery rates and user engagement. • Triggered communication Examples: • Booking related notifications related to purchase confirmation, cancellation, modifications, Your event is coming up, your rewards are about to expire, we think you'd like this upcoming event etc. • Membership signups, renewals, and cancellations etc. Marketing Communications: • Integrate with a marketing automation platform for the purpose of delivery of all marketing communications across all touchpoints. • Ability to supply customer segmentation to the marketing automation platform as required. Generic Requirements: • Ingestion of all customer communications done from the Marketing automation tool should be pushed to Viya backend for a complete 360 view of the customer.	
--	---	--

	• The MAP is envisaged to undertake segmentation, journey building, delivery of communications and associated reporting and analytics. • Ability to send notifications to administrators for critical system alerts failure events. • Ability to send notifications with images, videos, and interactive elements. • Integration with Deep linking solution. All communications should carry the appropriate the deep links (as suitable and applicable),	
VMA_18	Feedback, Review, Rating & NPS Tracking System: Implement a comprehensive system to collect feedback, reviews, and ratings for the Viya app and the User transactions/bookings. Integrate Net Promoter Score (NPS) tracking to measure customer loyalty and satisfaction. Provide actionable insights to improve app functionality, service quality, and customer experience. App Rating (App or Play Store): • Implement a star-based rating system (e.g., 1-5 stars) for the overall app experience. • Allow users to provide numerical ratings. • Provide options to configure the frequency of these rating prompts within the app. For example: App rating will pop up after 5 app sessions or 7 days post installation once every 3 months. • Delay prompting to users who may have run into crashes/errors based on crashlytics information App Review (App or Play Store): • Enable users to write detailed text reviews about their app experience. • Implement character limits and text formatting options. Transaction/Booking Rating and Feedback:	

	• Implement a star-based rating system for individual transactions and bookings. • Allow users to rate specific aspects of the service (e.g., staff, quality, timeliness). • Enable users to write detailed text reviews about their transaction or booking experience. • Implement automated prompts to encourage feedback after transactions or bookings. • Stagger these requests appropriately to avoid coming off as annoyance. • Allow users to provide feedback directly from the transaction/booking history. Partner Rating/Review Display: • Ability for consumers to rate and add review regarding partners on the App • Display partner ratings and reviews within partner profiles. • Provision in backend to view aggregate partner ratings and individual reviews. NPS Question Implementation: • Implement the standard NPS question: "On a scale of 0 to 10, how likely are you to recommend Viya to a friend or colleague?" • Display the NPS question at appropriate touchpoints (e.g., after transactions, periodically within the app). NPS Calculation: • Automatically calculate the NPS score based on user responses (Promoters, Passives, Detractors). NPS Reporting: • Generate reports on NPS scores, trends, and segmentation. • Provide partner facing NPS reporting for their services.	
--	---	--

	- Segment NPS data based on user demographics, transaction history, and other relevant criteria. Admin Dashboard: - Provide an admin dashboard to view and manage all feedback, reviews, ratings, and NPS data. - Allow administrators to filter, sort, and search feedback. - Enable administrators to respond to user feedback. Reporting and Analytics: - Generate reports on app and transaction/booking feedback, including rating averages, review trends, and NPS scores. - Track user satisfaction and identify areas for improvement. - Export data in various formats (e.g., CSV, PDF). Feedback History: - Users can view their submitted feedback and NPS responses. Image/Video Uploads: - Ability to upload images or videos with reviews.	
VMA_19	Viya Partner app : A comprehensive Viya Partner mobile application supporting both tablets and mobile devices, enabling partners to manage customer interactions, transactions, and offerings within the Viya ecosystem. Partner App Generic functionality: - Ability for the partner to login using user credentials and set up biometrics and PIN for future easy access. - Outlet specific Dashboards to be available on login.	

	• Ability to create custom reports for internal reporting and ability to export such reports, without any customer information • Customer contact information should be masked as default and revealed on request only for certain customers. • Reports to include financial data, user base metrics, and other relevant information. • Ability to use the partner app on multiple devices. • Ability to export reports in various formats (e.g., CSV, PDF). • Ability to upload documents and digitally sign partner agreements, with an export and share feature. Outlet Management: • Ability for the partners to submit images, content etc. Related to the partner outlet. • This submission should go through an approval process. Offer / Packages / Member Product Management: • Partners should be able to configure offers and promotions and submit relevant marketing information through the partner app. This should also undergo the relevant approval process. • Partners should be able to configure packages and membership product and submit the associated details for approvals. Partner App Transactional requirements: ▪ Ability to scan unified customer QR codes on Viya app. Scanning this unified QR code should also enable the associated offer to be auto applied to the transactions, post relevant validations. In case if multiple offers / promotions associated for a customer at a particular outlet, the customer should be given a choice to choose the offer to be applied. ▪ Mobile number entry for customer lookup.	
--	--	--

	▪ Ability to take a picture of the customer, in certain use cases for e.g. access pass check-in, package usage etc. ▪ Ability to check-in and check-out various access pass types (Adult, Child, Guest). ▪ Real-time tracking of access pass usage. ▪ Ability to initiate a transaction from the partner app for the transaction to be completed on the consumer app. ▪ Scanning the unified QR code should tag the usage against the particular package. ▪ Ability for the partner to view the package details and its associated usages and information. User Data Display: ▪ Display of user profile details (name, contact information, etc.). ▪ Display of user transaction history. ▪ Display of user points balance. ▪ Display of user offers/benefits associated with the partner. • Partner Profile Management: ▪ Add/update partner profile photo. ▪ Change password functionality. ▪ Ability to create child accounts ▪ View and manage all transactions for the respective outlet. ▪ View and manage all check-in/check-out records. Loyalty on Partner App: ▪ Ability to earn and redeem rewards points. ▪ Generate and send digital receipts to customers (applicable for PAX) ▪ Provide partners facing reports of loyalty usage within their outlets.	
VMA_20	General requirements:	

	The below requirements are generic in nature and are applicable to both mobile app and websites. Payment Experience • Integration with single or multiple PGs to support card payments, wallet payments, alternative payment methods, EPPs etc. • Support Pay with Points. • Viya Wallet (Top-up and ability to refund to wallet) • Ability to apply offers and promotions during the checkout process. • Ability to showcase Bank offers / BIN based promotions during the checkout process. • Support recurring payments during the checkout process. • Ability to generate payment links from the Viya bank end and communicate the links to recipients. • In booking failure cases, automatically issue full refund (On card payment, points- earned/redeemed, voucher settlement). • Ability to support Promo Codes across the app and website during the checkout process. Promo codes should be validated and associated benefits should be applied to the transaction. Offers, Promotions and Benefits Management (including Bonus Points) • Ability to configure various types of incentives such as discounts, bonus points, value-based vouchers, access passes and memberships, promo codes etc. • Configurations should support segmentation, transactional and non-transactional criteria for triggering incentives. • Incentives once triggered should be communicated appropriately in the app and through other communication channels. • The module should support various usage criteria for different types of incentives for e.g. outlets, minimum spends, timing etc.	
--	---	--

	• Ability to define various benefits for different customer segmentations such as employee discounts, member discounts etc. • Ability to configure offers of the form such as Do X and get Y. The incentives 'Y' can be any of the above-mentioned types of incentives. • Incentive Management and modifications should be possible from the backend. • Support to list multiple offers and option for customers to pick appropriate offer during the booking journey. • Ability to configure offers that can be auto applied at the checkout, or have to be selected, or the customer needs to enter the associated promo code for offer redemption at the checkout. • All types of incentives should be accessible during the booking journeys as applicable. • Ability to configure BIN based offers. • All offers that get redeemed should be shown in the associated transactions, including but not limited to bonus points. • Include a recommendation engine that generates dynamic product bundles and itineraries based on golf, dining, and event preferences. Fraud Management • Ability to define various parameters to flag potential fraudulent transactions. • These parameters should include but not limited to velocity, frequency, device, parameters. • Ability to flag potential fraudulent transactions. • Ability to act on fraudulent transactions. • Use AI / ML capabilities to optimize the functionality in detecting potential fraudulent transactions. • Do not allow concurrent log-in on devices (to be evaluated) Loyalty Applicability and Configuration	
--	--	--

	The loyalty earning and redemption to be available on all payment related transactions across the Viya platforms. However, loyalty applicability must be configurable including the option to enable and disable the functionality across the various sites. Personalization • Ability to serve personalized content, offers and promotions, pricing based on past transactional and behavioral data (locations, app events etc.) Reporting and Analytics • Access to the source data / data lake for internal data teams to draw custom reports and run ad hoc analysis. • Certain reports should be available with real-time data. • Data visualization tool should be able to support interactive dashboards with drill-down to detail capability. • Below category of reports needs to be provided - Transactional and revenue reporting across all products on app and website. - All products, services, business activities should have a transactional list view with filtering and downloading capabilities over and above the ones mentioned below. - Dashboards for customer info, within the app to self check their engagement, performance, loyalty, progress etc. - Customer Registration and profile related reports. - Campaign related reporting. - Loyalty related Reports Content Management • Rich text editor (WYSIWYG) • Markdown support (optional)	
--	--	--

	• Media embedding (images, video, audio) • Drag-and-drop page builder • Revisions & version control • Scheduled publishing • User based access with customized permissions • Media library with folders/tags • Image optimization (resizing, formats like WebP) • CDN support for fast delivery • Support Flexible content types (e.g. images, videos, blogs, user generated content, GIFs, animations, text, magazines, PDFs, epub etc.) • Push notification content management • Testing Capabilities such as A/B testing. For the website: • SEO tools (meta tags, sitemaps etc.) • Theme/template engine for frontend • Navigation and menu management • Form builder • Analytics integration (Google Analytics etc.). • Enable server-side-tracking via google tag manager. Enable tags across the web and app to track events like view, browse and click Generic Requirements: • Headless CMS or hybrid to serve mobile content • App version-specific content control • Content approval workflows • Audit Logs and activity history • SSO Login • Tags and categories for content sorting • Multilingual content support Application Monitoring • Real-time tracking of application health and uptime • Quick detection and alerting of system failures or performance bottlenecks • Visibility into user behavior and error rates • Support for diagnostics and debugging • Scalable and cost-effective for future growth • Uptime monitoring (ping, HTTP checks)	
--	---	--

	• Response time tracking (backend, frontend, APIs) • Page load time, time to first byte, etc. • Real-time error alerting • CPU, memory, disk, and network usage • Threshold-based alerts • Anomaly detection (machine learning-based optional) • Integration with Teams and Emails • Custom dashboards for different teams (Dev, Ops, QA) • Real-time metrics • Historical data visualization • Daily/weekly health summary reports • Dependency maps (services, databases, external APIs) • Session replay • User journey tracking • Heatmaps for the backend portals (for UX improvements) • Integration with ticketing tools (Jira, Asana) Referral Management • Ability to configure a referral program, including the benefits that can be given to referrers and referrers. The configuration should include the caps and other parameters. • The incentives that the person can be in the form of rewards or any other incentive that the program supports. • Ability to share the referral codes with others. • Ability to track the referrals and its associated statuses. Navigation Implement search and filter functionality for easy discovery for products and services across the app and website. Cancellation/Void and Modification: • The system should allow for cancellations and modifications, adhering to the cancellation policy per section. • Refunds should be processed according to the refund policy.	
--	---	--

	• Cancellation policies should be clear to the user during the booking process. The cancelled slot should be made available for the users to make the booking if it's not a past date and time. • The system should allow for processing manual cancellations and refunds from the backend system. Customer database management: • All registration data should be securely stored in the backend database. • The system should implement data validation to ensure data integrity. • The system should perform uniqueness checks on email addresses, contact numbers, and usernames during registration. • The backend should store the registration source (form or social media). • The backend should store the device information. • The backend should log all registration attempts and successful registrations. • The backend should have a mechanism to reset passwords, resend OTPs, and disable accounts. • The backend should have an audit trail of changes to user accounts. • The backend should have an API for the frontend to communicate with. • The backend must have data encryption for sensitive data. In-app Monetization • Ability to serve sponsored content (banners and videos) at pre-defined places in the app and web journeys and customer email communications • All associated click and view tracking and events matrices should be tracked and made available in reporting. • Ability to control the display of the sponsored content to certain custom generated user segments. • There needs to be a provision on how many times the customer sees the sponsored content. AI Capabilities:	
--	--	--

	Considering the Viya app has a multitude of booking options, there is a need to innovate this functionality to exceed customer usability, engagement and expectation in Viya 2.0. • Implement a voice + text activated GenAI-based interface for customers to interact with the app, providing abstracted booking journeys using existing app functionality. For example, customer input would be “Would like to book a round of golf for 3 players at Majlis Golf course on 21st April”. And AI output would be a ‘Book Now’ button which when clicked goes straight to the payment journey. • Implement GenAI-based voice + text activated universal search functionality. • Enable GenAI chatbot with screen-relevant FAQs and proactive suggestions for the next best action. • AI model training data protocols • Content moderation for AI outputs • Voice interaction governance Customer Care Capabilities • Ability for customer care capabilities over different channel, such as email, social, voice, chatbot. • A suitable technology matching these capabilities to incorporated into this solution.	
VMA_21	Localization The app should support localization (Multi-country, Multi-currency, Multi-lingual) at the foundation/global level to serve users across various international regions effectively. This includes: • Interface: The app interface should dynamically change based on the user's geo-location offering the products, offers and services available in the	

	region. Provision for user to switch regions and chose default region should be available. • Content: Backend should support option to configure products, services, offers, payment gateway, taxes, notifications etc. in accordance to the region. • Loyalty: The app and website to support cross-border loyalty points and management. • Language: Adapt the language based on the user's region/selection. Backend should also serve dynamic content for the language, including item names, descriptions, banners, offers, notifications and static pages as applicable (T&C, Privacy Policy). For languages like Arabic, the app shall support the RTL layouts and alignment needs across all screens	
VMA_22	Integrations and API's (Common for both App and Web) Integrations with: 1. Payment Gateway. 2. ERP 3. Marketing Automation Tool 4. DataLake 5. Loyalty Management System 6. Customer Care System / CRM 7. POS 8. Deep-linking Platform 9. Other service providers – Yalago, PrioHub, Prosports 10. Club Management System 11. Viya Partner Portal 12. Department of Tourism and Commerce Marketing (DTCM) 13. Reservation Management System 14. Identity and Access Management 15. Application Performance Monitoring (APM) 16. Analytics and Reporting Platform (Google Analytics, Firebase, Power BI)	

VMA_23	Viya Marine: ▪ Dedicated Viya Marine section on Viya. ▪ This section should have a list of offerings from Viya Marine Business ▪ Listing of all available boats and Leasing / renting options. All additional details such as pricing, capacity, images etc. to be showcased. ▪ Option for leasing/renting of the boats to be available on the app with online booking and payment options. ▪ Option to show events and promotions relating to Viya Marine such as boat show ▪ Inquiry system for Berthing across locations - Dubai Creek Marina, Jewel of the Creek Marina, And the One & Only Marina. ▪ Charter booking system ▪ Marine Retail section.	
VMA_24	Viya Connect: • Scheduling and booking of sessions with Pros, Celebrities, business leaders etc. • Integration with video conferencing platforms. • Payment management for session fees. • Fees sharing configuration between pros and Viya or any other stakeholders. • Ability to bid for a slot.	
VMA_25	Table Reservation • Ability to reserve a table for given date, times and outlet. • Option to select number of guests and check real-time availability, if applicable. • Option to add custom notes during reservation (e.g., “birthday celebration,” “need a highchair,” “allergic to peanuts” etc..).	

	• View and manage all reservations. • All generic payment, cancellation, modification and communication policies will apply. • All generic reporting requirements will apply to this booking functionality. • Manage API integrations with third-party systems for functionality.	
VMA_26	Topgolf: • A dedicated section within the Viya App • Display a list of all Topgolf venues within the section, each featuring detailed information including venue overviews, current promotions, special events, food and beverage offerings, and a visual gallery showcasing the spaces and experiences unique to each location. • Allow all real-time bay booking options, table reservation, package purchase options and event bookings functionality within the app • The Topgolf section will feature options such as Lesson and Classes Booking, Menu Ordering, Events, Membership and other key services, each seamlessly redirecting users to the existing functionalities and user journeys within the Viya app for a unified experience • Integration with VGS system to show appropriate information such as scores, leaderboards and player related information. • All generic payment, cancellation, modification and communication policies will apply. • All generic reporting requirements will apply to this booking functionality.	
VMA_27	Wikit, Bowling, Dart, Five Iron: • These are individual sports services offered at various venues on the Viya App that involve reservation functionality • Requires option for customer to see more details of the outlets, offers and promotions.	

	• Customers should also be able to view availability in real-time and avail appropriate member and non-member pricing to book preferred slots to make reservations. • In certain instances, equipment selection and rental options to be available. • A provision should be included within the Viya backend architecture to support enablement of in-house configuration and management of in-house complexes and bays. Subject to the facility management system in operation at the venues, API Integration with third party systems like SevenRooms, Mind and Body etc. Will be required to provide reservation functionality. • All generic payment, cancellation, modification and communication policies will apply. • All generic reporting requirements will apply to this booking functionality.	
VMA_28	Sports Simulators : • A dedicated section within the Viya App to list the sports simulators like top tracer, trackman etc. by venue and allow users to book sessions. • Capability to configure/manage various venues/outlets. • Support searching for available time slots, viewing bay availability, and completing bookings through existing payment options. • Enable session selection, display member and non-member pricing, apply maintenance messages • Booking and Modification to follow as per the generic requirement • All generic payment, cancellation, modification and communication policies will apply. • All generic reporting requirements will apply to this booking functionality. • All simulator related data—including venue availability, bay configurations, session timings, pricing (member and non-member), and booking operations—will be sourced and managed via integration with external systems	

	A provision should be included within the Viya backend architecture to support enablement of in-house configuration and management of simulator complexes, bays, availability and bookings.	
VMA_29	Fitness: A dedicated section within the Viya App to list all Fitness related promotions, offerings, memberships, packages, coupons, access passes and featured Viya Fit outlets based on their category. - Option to list offers that expand further into offer details as well as provisions for redemption for the user - Option to list various outlets, respective categories and fitness packages within it. This follows the academy purchase user journey within the app including the class/lesson booking journey. - Option to list the various fitness passes. Selection of the same will follow the access pass purchase user journey within the app. - While core functionalities fitness related bookings will be powered via third-party APIs, all remaining content within the fitness section should be manageable through the Viya backend, ensuring flexibility in updates and administration. - Integration with fitness tracking devices and display of customer related information - All generic payment, cancellation, modification and communication policies will apply. - All generic reporting requirements will apply to this booking functionality.	
VMA_30	Viya Events : - Display a section highlighting upcoming events, its details and promotions. - Provide event details and registration options.	

	• Ability to buy packages, passes / vouchers for the events • All generic payment, cancellation, modification and communication policies will apply. • All generic reporting requirements will apply to this booking functionality. • Applicable Events and related Information should be also configurable/manageable from the Viya backend as well. Banqueting / Event Venues • Customers should be able to see the Images and videos of the event venues • Customers should be able to make inquiries, and these should integrate with lead management systems such as HubSpot etc. • Ability to export / Import the submitted details in a certain configurable format. Integration Management: • Manage API integrations with third-party systems such as SevenRooms for event information and inventory. • A provision to integrate with third party such as DTCM for ticketing services and management for events. • Lead management system.	
VMA_31	Personalization The app and websites should support personalized user experiences by dynamically tailoring content, recommendations, and interactions based on user preferences, behavior, location, and profile attributes. Personalization should enhance relevance across key journeys such as bookings, offers, notifications, and content discovery, while maintaining consistency with the overall user experience framework.	
VMA_32	Dynamic Messaging Controllable Dynamic Messaging:	

	• Implement a system to display dynamic messages on the app with push notification. • Support various message types (e.g., text, images, videos) • Allow administrators to create and schedule messages for specific user segments or based on user activity for example when entering into specific geo-fenced locations and other criteria • Allow administrators to set the duration for which messages are displayed • Also option to configure the frequency to repeat the message notification .	
VMA_33	Hotel and Experiences : To introduce hotel and experience booking capabilities into the Viya mobile application, allowing users to search, browse, and book hotel stays as well as experiences through integrated APIs or partner content. This will enhance the Viya lifestyle offering by enabling a seamless travel experience alongside golf, dining, and activity reservations. • Add a new Hotel Booking section to the Viya app navigation. • Search flow for hotels by location, date, number of guests, and filters (star rating, amenities, etc.). • Display listings with hotel details including images, description, room types, availability, prices, and guest ratings. • Enable booking flow with support for: ○ Room selection ○ Guest details entry ○ Booking summary and payment • Provide post-booking features: ○ Booking confirmation screen and receipt ○ Booking history accessible via “My Bookings”	

	○ Modify/Cancel bookings as per policy Experience Booking To enable booking of a wide range of experiences—such as tourist attractions, spa sessions, wellness treatments, guided tours, cultural events, and other activity-based services—within the Viya mobile app. This functionality aims to enhance user engagement, increase cross-sell opportunities, and position Viya as a comprehensive lifestyle and travel platform. • Introduce a dedicated “Experiences” section in the app. • App screens will support: ○ Category browsing (Spa, Attractions, Adventure, etc.) ○ Filtering and search (by location, price, time, type) ○ Experience detail views with images, descriptions, duration, pricing, and inclusion/exclusion info. • Booking flow with: ○ Real-time date/time slot availability via API ○ Selection of number of guests, add-ons, etc. ○ Integrated payment and confirmation screen • Post-booking section to view, modify, or cancel bookings (where permitted by provider)	
VMA_34	Gift Card Functionality This product will enable us to configure branded gift card products enabling Viya to sell these on its own channels and 3rd Party channels. This product is interchangeably also called voucher functionality. • A gift card can be brought for self, can be gifted or can be shared. This should be configurable. • Configurable at outlet level – Single or multiple outlets. • Pricing configurations – at face value, at discount or at premium.	

	• Validity Configurations – start date on purchase, start date from first spend, fixed validity etc. • SKU category configurations – applicable for integrated outlets only, Ability to define categories on which the gift card can be redeemed for e.g. food, alcohol etc. • A unique code should be generated on every purchase of the voucher. • Voucher Code generation should be done through an API request, manual generation of bulk code generation. • Ability to export generated codes – as text, as bar codes or as QR codes. • API integration with 3rd party sellers and platforms. • Generic payment functionality as mentioned above is applicable. • Customers should be able to redeem the gift cards directly at the applicable outlets. This gift card is a method of payment for the outlet and all earning and redemption rules are applicable. • By scanning the gift card, customers should be able to add the gift card to a Viya account. This will enable the customer to use the gift card directly from the app and also keep track of the balance left and associated transactions etc. • There should be a self-serve mechanism to enquire about the balance and validity, that is outside of the app and web for e.g. USSD functionality etc.	
VMA_35	Viya Wallet The Viya Wallet is a secure, digital wallet feature within the Viya app that allows users to top up their balance using standard payment methods (such as credit/debit cards or other supported gateways) and use the stored balance as an alternative payment method across Viya services. It offers a convenient, cashless experience for booking activities, making purchases, and managing transactions within the app.	

4. Scope for Viya Website:

ID	Description	Priority	Comments
VWB_1	Viya.com: The main purpose of Viya website is to consolidate all existing websites into one unified website. The website should cater to both UAE and International market. The website will serve as a central hub for all Viya offerings, integrating golf, lifestyle, dinning, leisure and loyalty functionalities The websites that will be included: ▪ Dubaigolf.com ▪ Bydubaigolf.com ▪ Revamping Viyagolfholidays.com (Including B2B portal) that caters to various business functions like Golf Tee Time booking, Hotel Booking, Packages (Hotel and Golf) and experiences. ▪ Merging Viya.ae in to Viya.com ▪ Landing page / Entry Point for sausage kitchen website with redirection ▪ Landing page / Entry Point for WIKIT website with redirection ▪ Landing page / Entry Point for Topgolf website with redirection ▪ Viya-marine.ae ▪ TOPGOLF e-commerce ▪ Merging www.viyaaccess.com into Viya.com ▪ Merging Viyafit.com into Viya.com WIKIT, Top Golf, Sausage kitchen, viyagolfholidays.com will be separate individual websites which need to be developed as part of this engagement. The website should cater to both UAE and International market. • Consistent Branding: Ensure the new design uses the brand colours, fonts, and elements more consistently to reflect the global Viya identity. The website should represent Viya brand,	•	

	showcasing loyalty programs, partner listings, and links to the Viya mobile app. • Functional areas: ▪ Integrated profile management (refer to VMA_16) ▪ Member Zone (refer to VWB_4) ▪ Pass purchase only (refer to VMA_7) ▪ Voucher purchase only (refer to VMA_34) ▪ Gift card purchase only(refer to VMA_34) ▪ F&B table reservations – Interfaced with table booking system. • Gallery: to view the Viya facilities as a 360 view venue walkthrough • Featured Experiences: Include interactive highlights of Viya experiences (Promotions, special events, and offerings) on the homepage with direct links to book/find out more. • Include a more prominent and integrated section for Viya app, allowing users to easily learn about benefits, download and sign up, and manage their accounts. • Careers page: working at Viya with a submission form (cover letter and attached resume) + data capture form (name, gender, age, email address) to our recruitment email • Analytics & Tracking • Implement detailed Google Analytics, heatmaps, and conversion tracking to monitor website performance, user behaviour, and areas for improvement. • Lead Generation & CRM Integration • Localization Requirements		
--	--	--	--

	- Website should offer following regional and geographical options: - Multi-Country - Multi-Currency - Multi-lingual like British English, Arabic etc. - As Viya expands its footprint across new locations, the website must accommodate the new venues having its own page with unique content. Location-Based Content - The ability to display location-specific offers, events, and services for each venue. Website Considerations - Design a multi-venue website that incorporates robust CMS platform for the Viya brand while allowing each venue to maintain its identity - Ensure the design remains responsive and optimised for both desktop and mobile users. - It should be more image focused which promotes organizational assets in a better way. - Integrate venue-specific functionalities like bookings, events, purchase packages and memberships while ensuring consistency across all pages. - Ensure the site is optimised for SEO and allows for easy content updates and venue additions. Content & Media Migration - Migrate relevant content from the current website to the new multi-venue platform, ensuring content is tailored to each specific venue. Interfaces - CRM system like Hubspot/Sale Force interfacing for Lead capture, lead lifecycle and forms etc.		
--	---	--	--

	• Chatbot plugin • Google Analytics & Firebase • Cookie consent management tool • SEO plugins like Yoast • All customer & transaction information sharing with data lake • Data integrations – META, Google tag manager, Pixel etc. • Enhance social media integration by displaying live feeds, user-generated content, and Instagram-worthy moments from venues to boost engagement.		
VWB_2	Pre-registration and Registration- Refer VMA_1		
VWB_3	Login VMA_2		
VWB_4	Members zone on Viya website: Provide a specific zone for members of the clubs/properties with following features : Bulletins • Announcements like general update, Golf update, GM update, Recreation update, Agronomy update, Course closure, Tournament and Handicap rules etc. . General • Multi property membership support. Different user journey & setup restrictions based on membership privileges. • Calendar of Events with option to drill down into the Event details and register etc. • Manage settings, preferences, notifications etc. • FAQ section for Members Statement of account		

	• View & download statement of accounts for past months and current month • Register & maintain multiple mode of payments • Auto and on-demand dues settlement either partially or in full • Raise queries for clarifications/corrections, tracking & status update. Memberships • View current membership status, payments processed, payments due etc. • Review upcoming membership contracts renewal • Renew membership contracts by settling dues either in full or in installments • Subsequent installment processing, error handling, offline installment processing etc. • Support additional features like discontinuation requests, change of membership type etc. • Renewal journey based on type of membership • Tee time booking (refer VWB_5) • Tournament and results (refer VMA_5) MCC team and feedback • Members consultative committee write up, members profile etc. • MCC meeting minutes, updates, notifications etc. • Receive MCC feedback and suggestions. Colleague Appreciation • Colleague appreciation submission by members • Receive notifications, review submissions etc. Guest Wi-Fi Authentication • Viya member including Club/venue member should be able to login using Viya credentials. Online Membership subscription		
--	---	--	--

	• View membership types per club/venue filtered by membership categories, subcategories, duration etc. • Submit interests related to membership triggering notifications for respective membership team. • Generate leads and capture & track lead lifecycle through CRM system • Support member onboarding process, have account created in the backend system, collect necessary documentation & artifacts, send welcome pack etc. Other Links & Content • Handicap • Hall of Fame – Past tournament winners • Reciprocal club listing • European tour listing • Colleague appreciation • Pace of play • Dress code • Golf Etiquette • Club guide Reporting • Generate on demand statement of accounts, report on payments methods registered by the customer, tracking and reporting of payments, statement queries etc. • Membership renewals processed, pending, failed payments, change requests, cancellations based on type of customer etc. • MCC feedback, colleague appreciation reports • Transaction logs, error tracking including all interface touch points etc.		
VWB_5	Tee Time, Hotel & Experiences Bookings:		

	Member tee time booking management should be made available from viya.com and non-member booking features should be developed in viyagolfholidays.com User Types and Access: • The system must provide a seamless and enhanced tee-time booking journey for both registered members and non-members. • Support for dynamic pricing for various user types on the websites. • Ability to filter Tee-Times by club, course, date and time, Price, Location, holes and player configuration, etc. • Members should have access to exclusive booking windows, rates, coupon/offer/privileges, pay later, and booking extensions. • Enable Waitlist functionality only to the members. • Members should have peak and off-peak views where single available tee time and full tee sheet view is shown. • Non-members should be able to register and book tee times with their respective pricing and access. • Support for golf slot yield management. Player Variations: • The system should accommodate bookings for fellow players per tee time, with clear limitations based on the golf course's policies. • Support for adding Buddy's/Friends to the booking. • The system should support individual bookings and group bookings.		
--	---	--	--

	• System should allow user to select appropriate player types (Viya Rate, Junior rate, EGF rate etc.) during the booking journey. Time-Based Pricing and Availability: • The system must differentiate between Peak and Off-Peak timing, adjusting pricing and availability based on these periods. • Real-time availability of tee times should be displayed. • Setup advance booking window privileges for members & non-members Add-Ons: • The system should allow users to add optional add-ons to their bookings, such as: ○ Golf cart rentals ○ Club rentals ○ Practice range balls ○ Shoe rental ○ And more • Add-on availability and pricing should be clearly displayed. Hotel & Experiences bookings • Display hotel inventory, amenities, ratings, room specifications, price points etc. • Filters based on pricing, location, • Maintain hotel master and respective parameters to manage the inventory. • Offer experience bookings		
--	--	--	--

	• Offer ability to book Hotel, Golf + Hotel and Experiences. • Display partner listing, filter partners, view services & offers. • Capture guest details, special needs • Content management system to update website content • Maintain terms & conditions, privacy policy, cancellation & modification policies etc. Federation Fees: • Federation fees and applicability should be configurable per region. • The system must accurately calculate and include any applicable federation fees during the booking process for the selected players to choose. • Fee breakdowns should be transparent and easily accessible to the user.		
VWB_6	Loyalty Program: Refer VMA_10		
VWB_7	User Profile Management: Refer VMA_16		
VWB_8	Localization -Refer VMA_21		
VWB_9	Redirections for sub-brands: Refer VWB_1		
VWB_10	Viya Marine- Refer VMA_23		
VWB_11	Sausage Kitchen: Dubai Golf operates Sausage Kitchen brand which manufactures sausages being sold to various markets. We are looking to create a new ecommerce website to display, market, and sell products produced by sausage kitchen. This will be an independent website hosted under separate domain like sausage-kitchen.com. This ecommerce website should include but not be limited to the following features: Product Catalogue:		

	▪ Detailed product listings with images, descriptions, and specifications ▪ Categories and subcategories for easy product navigation ▪ Search functionality with filters and sorting options. ▪ Feature categories within navigation or on the homepage ▪ Set categories as “Active” or “Inactive” ▪ Set page URL’s and SEO elements for categories ▪ Manage categories thumbnails and images. • Shopping Cart: ▪ Add, remove, and edit items in the cart ▪ Save items for later ▪ Estimate shipping and taxes • Customer reviews and ratings: ▪ Allow customers to leave reviews and rate products. ▪ Moderation tools for managing reviews • Order Management System: ▪ Track order status from placement to delivery ▪ Order history and details for customers ▪ Admin dashboard for managing orders • Customer Support: ▪ Live chat support ▪ Email and phone support options ▪ FAQ section • Inventory Module: ▪ Real-time inventory tracking ▪ Alerts for low stock levels ▪ Product SKU management • Interface with Delivery Partner: ▪ Integration with major delivery service providers ▪ Automated shipping label generation ▪ Real-time order tracking for customers • Order Tracking: ▪ Provide customers with tracking information		
--	--	--	--

	▪ Automated status updates via email/SMS • Returns Management: ▪ Easy return and refund process ▪ Return status tracking ▪ SMS and Email Integration ▪ Order confirmations and updates via SMS and email. ▪ Marketing campaigns and promotions • Special Offers and Discounts: ▪ Manage discount codes and promotional offers ▪ Display exclusive offers on product pages and checkout eCommerce SEO Management Features: • Manage all dynamic title tag structures throughout the website. • Configure dynamic title and META tags for categories and sub-categories, brand pages, product pages, • Configure site-wide default title and META tags. • Configure homepage title and META tags • Set unique title, META tags and URL information for specific content pages, category, brand, or product pages • Interfaces • Integration with Delivery partner for order submission, tracking, updates etc. • Ecommerce Integration with SAP ERP for inventory purposes • Network International hosted Payment gateway, no CC storing/processing on local website ecosystem • CRM system like Hubspot/Sale Force interfacing for Lead capture, lead lifecycle and forms etc. • Chatbot plugin • Google Analytics		
--	---	--	--

	• SEO plugins like Yoast • All customer & transaction information sharing with data lake for analytics purposes • Data integrations – META, Google tag manager etc. • Social media integrations • Cookie consent management tool • Analytics and Reporting • Interactive administrative dashboard with charts and statistics • Sales reports and analytics • Customer behaviour and trends analysis • Dashboard date-range reports include store sales by amount, store sales order volume, new customers vs. returning, top-selling products, top-selling brands, most used discount codes. • Dashboard general reports (not based on the date range) include low inventory reporting, total products in-store, total categories in-store, customer count, lifetime orders, and lifetime revenue. • Inventory and stock level reports • Sales by date range, top-selling product by date range, low inventory by quantity, and new customer by date range		
VWB_12	WIKIT Website: The WIKIT website requirement is to develop a new website and provide a landing page on “Viya.com” website. The features that will be developed for the WIKIT website will be: • Bookings: (Like Batting, Bowling, Dart, Table reservation, etc.) ▪ Checking of availability based on selected location, date, number of players/Guest, age demographics etc. Flexibility		

	to define number of days in advance booking can be made per location e.g., 30 days, 180 days etc. ▪ Different pricing and availability based on number of players and booking duration e.g., 30min, 45min, 60min, 90min etc. Option to book more than 1 batting nets. ▪ Locking/holding a slot for the customer till transaction is completed ▪ Collect customer information and display booking summary ▪ Accepting Terms & Conditions ▪ Payment processing through payment gateway ▪ Triggering of confirmations be email, SMS etc ▪ Options to add the booking in Calendar, sharing with others etc. ▪ Trigger booking reminders by email, SMS etc ▪ Ability to customize all notifications e.g., confirmation, reminder templates per location • Booking Amendments: (Like Batting, Bowling, Dart, Table reservation, etc.) ▪ Ability to setup booking modification and cancellation window ▪ Ability for customers to view the existing bookings ▪ Ability to add up players/guests to the existing bookings. ▪ Ability to modify bookings as per modification policy. ▪ Ability to cancel bookings as per cancellation policy. ▪ Booking add-ons ▪ Ability to define booking add-ons based on type of booking e.g., F&B packages, restaurant tables, batting nets etc. ▪ Customer can choose these add-ons during booking process ▪ Ability to define rules when these add-ons can be chosen based on the type of booking ▪ Group reservation form linked with HubSpot • Website should offer following regional and geographical options:		
--	---	--	--

	• Multi-Country • Multi-City • Multi-Venue • Multi-Currency • Multi- lingual • Interfaces · Sevenrooms API for batting net, table, F&B package bookings · BatFast system for player pre-registrations etc. · CRM system like Hubspot/Sale Force interfacing for Lead capture, lead lifecycle and forms etc. · Chatbot plugin · Google Analytics · SEO plugins like Yoast · All customer & transaction information sharing with data lake for analytics purposes · Data integrations – META, Google tag manager etc. · Social media integrations · Cookie consent management tool		
VWB_13	Viya Golf Holidays Website B2B (Hotel, TO, DMC) Portal: The Viya B2B Portal is a dedicated booking platform within the Viya Holidays website, tailored for Hotel Concierges, Tour Operators, and DMCs. It enables these partners to reserve golf tee times with ease, manage payments, and benefit from a reward system. The platform supports parent-child account structures, integrates with Concept APIs for real-time pricing and availability, and includes configurable policies for booking, cancellation, and loyalty management. • Provide dedicated website access for Hotel Concierges, Tour Operators, and DMCs		

	• Implement registration flow capturing additional partner-specific details • Enable parent-child account structure with password management for primary users • Allow tee time bookings up to 365 days in advance • Integrate with Concept system to fetch pricing and availability via customer number • Enforce booking limits (max 15 pax per course/day via API validation) • Offer “Pay Now” and “Pay Later” options, with restriction on “Pay Later” if play date is <72 hours (configurable) • Enable optional dynamic pricing logic (future-ready), with upfront payment and no rewards or modifications • Credit 10% reward points to individual user on completed bookings • Make loyalty points viewable per user, with configurable point accrual rules • Automate payment reminders 84 hours (configurable) before play date for unpaid bookings • Block new bookings if credit limit is exceeded across linked accounts (Concept API) • Allow modifications and cancellations based on configurable policy (e.g., 72-hour cutoff) • Require cancellation reason, configurable from backend • Send booking confirmation emails to parent/child accounts with BCC to support • Include cancellation/modification policy in email confirmation • Provide backend configuration for rewards, policies, and cancellation reasons • Allow users to view and pay for unsettled bookings • Log and store all bookings under parent account with rewards issued to booking user		
--	---	--	--

	Route exception emails to customer support for any booking errors		
VWB_14	Topgolf Website The goal is to design and develop a new, user-friendly, and visually appealing website that reflects Topgolf. The new website will utilize a new URL and serve as a multi-venue, multi-language, multi-currency platform, enabling users to seamlessly browse information, book bays, and engage with specific Topgolf locations, including current and upcoming sites. Navigation & User Experience: Clear CTAs: "Book a Bay" or "Host an Event," should be more prominent throughout the site to drive conversions. Menu Viewing: interactive and dynamic menu viewing capabilities for each venue, allowing users to easily browse food and beverage options. Menus should be fully interactive and location specific with filters allowing users to explore items by category (dietary preferences, popularity, or categories). Users should be able to switch between different venues' menus seamlessly through a drop-down or venue selector. Provide users with the option to download as a PDF/share to WhatsApp. Content Layout & Information Architecture Gallery: to view the spaces in Topgolf as a 360 view venue walkthrough Featured Experiences: Include interactive highlights of Topgolf experiences (F&B promotions, top golf		

	academy, special events, and food offerings) on the homepage with direct links to book/find out more. • Online Booking • SevenRooms API Integration: Integrate SevenRooms via API to allow users to book directly through the website without being redirected to external platforms - bay bookings, dining, and events. • Real-Time Availability: Display real-time availability for different services across all venues, ensuring users can view accurate booking slots. • Simplified User Journey: Streamline the booking flow to minimize the number of steps required for users to complete their reservation. • Personalized Booking Options: Offer dietary needs, accessibility preferences and upsells during the booking process • Automated Confirmation & Reminders: Users to receive automated email/SMS confirmations and reminders • Multi-Venue Integration: To accommodate multiple venues, with the ability to select the desired location and check availability across all venues using a centralized platform. • Events • Enhance the current events section to offer a more detailed and interactive customer journey: users to build out their event directly on the website, receive a price estimate, and submit their inquiry to the events team. This feature will improve the user experience and streamline the event booking process.		
--	---	--	--

	• Event Customization Tool: Allow users to select from various event options (corporate events, birthday parties, private events) and customize their package by choosing from suite layouts, food and beverage options, guest numbers, and additional services. • Real-Time Pricing: Display a real-time price estimate based on the event and F&B options selected to understand the costs before submitting the inquiry. • Submit & Automate: Once the event details are finalized, users can submit the form directly to the events team with a single click. An automated confirmation email will be sent to the user, acknowledging receipt of the inquiry and providing a summary of their event selections. • Integration with CRM: Ensure seamless integration with the events team's CRM or management system to allow for smooth tracking and follow-ups. • Improved UX for Event Planners: Provide a clear, easy-to-navigate interface that guides users through the entire event planning process, with visual aids (such as floor plans and images) for a more immersive experience. • Integration & Features • Viya Integration: Include a more prominent and integrated section for Viya, allowing users to easily learn about benefits, sign up, and manage their accounts. • Social Media Integration: Enhance social media integration by displaying live feeds, user-generated content, and Instagram-worthy moments from Topgolf Dubai's venue to boost engagement.		
--	---	--	--

	• Multilingual Support: English and Arabic to cater to a wider audience. • Careers page: working at Topgolf with a submission form (cover letter and attached resume) + data capture form (name, gender, age, email address) to our recruitment email • Analytics & Tracking • Implement detailed Google Analytics, heatmaps, and conversion tracking to monitor website performance, user behavior, and areas for improvement. • Lead Generation & CRM Integration • Multi-Venue Website Requirements • As Topgolf expands its footprint across new locations, the new website must accommodate the following multi-venue functionality: • A venue selector that allows users to choose their desired location (e.g., Dubai, Abu Dhabi, etc.) from a drop-down or map-based interface. • Each location should have its own page with unique content, such as venue-specific details, hours of operation, events, pricing, and promotions. • Location-Based Content • The ability to display location-specific offers, events, and services for each venue. • Geo-targeting capabilities to direct users to the nearest venue based on their location or allow them to select manually. • Website Design • Design a multi-venue website that incorporates the Topgolf brand while allowing each venue to maintain its identity.		
--	--	--	--

	• Ensure the design remains responsive and optimized for both desktop and mobile users. • Content & Media Migration • Migrate relevant content from the current website to the new multi-venue platform, ensuring content is tailored to each specific venue.		
--	---	--	--

Non-Functional Requirements (NFR) for Viya App and Website

1. Performance and Scalability

- The system shall support up to 10,000 concurrent users with no performance degradation.
- Landing pages must load in <2 seconds, product pages in <3 seconds, and checkout flows in <5 seconds.
- Conduct load testing and stress testing for peak usage scenarios.
- Architecture must support global scalability and be ready for international expansion.
- Use CDN for content delivery with image optimization and lazy loading (e.g., WebP formats).
- Ensure performance is maintained across device types, including tablets and foldable screens.

2. Security and Compliance

- Adhere to Viya MBSS (Minimum Baseline Security Standards).
- Comply with GDPR, UK DPA, UAE data protection regulations, and PCI DSS standards.
- Implement multi-factor authentication (MFA) and role-based access control (RBAC).
- Enable secure password management and self-service account recovery.
- Maintain detailed audit logs for all user and system activities.
- Penetration testing must be conducted by an independent party and all vulnerabilities resolved before go-live.
- Ensure audit trails for content changes, profile updates, and loyalty transactions are tamper-proof and stored for a minimum of one year.

3. Availability and Disaster Recovery

- Host platform on Microsoft Azure UAE region with high availability and redundancy.
- Implement automated daily backups and provide data recovery options.
- Develop and maintain a Disaster Recovery Plan (DRP) and validate through testing.
- Uptime SLA should guarantee a minimum of 99.9% availability.

4. Maintainability and Supportability

- Use modular, microservices-based architecture for easy updates and scalability.
- Maintain centralized code repositories with version control.
- Provide complete documentation, including source code, configuration, and release notes.
- Enable ongoing support including incident response, SLA-based issue resolution, and system monitoring.
- Define issue resolution timelines based on severity: e.g., Critical (24 hrs), Major (3 days), Minor (7 days).

5. Monitoring and Analytics

- Integrate application monitoring tools (e.g., New Relic, Firebase Crashlytics) to capture errors, crashes, and performance bottlenecks.
- Maintain dashboards for real-time system health and performance reporting.
- Support proactive alerting for outages, high resource usage, and failures.
- Enable server-side tracking using Google Tag Manager.
- Tag important user actions (e.g., view, browse, click) across both app and web interfaces.
- Adopt structured logging and enable distributed tracing using correlation IDs.

6. Usability and Accessibility

- Comply with WCAG 2.1 accessibility guidelines across all modules.
- Conduct UX research and usability testing for all user journeys.
- Ensure a consistent and intuitive UI/UX across app and web.
- Recommend interactive states and animations to enhance user engagement.
- Improve onboarding and navigation with progress indicators and contextual guidance.
- Support persona-driven onboarding flows.

7. Localization and Internationalization

- Support multi-language (including English and Arabic) and multi-currency capabilities.
- Ensure seamless localization of content, formatting, and payment preferences.
- Maintain Hreflang attributes and support international SEO.
- Implement fallback logic for unsupported content and languages.

8. Data Integrity and Synchronization

- Ensure consistency of user data, loyalty points, transactions, and profiles across the app, website, and backend.
- Support real-time sync between systems (e.g., Viya Loyalty Platform, ERP, CRM).
- Handle concurrent updates and duplication scenarios effectively.
- Ensure data synchronization integrity with automated conflict resolution logic.

9. Interoperability and Integration

- Support API-first design with scalable gateways.
- Enable integration with external systems such as Micros POS, SAP ERP, SevenRooms, Loyalty Platform, Branch.io, Google Analytics, and others.

- Maintain documentation and security standards (e.g., rate limiting, throttling, and logging).

10. SEO and Discoverability

- Implement best practices for SEO including meta tags, schema markup, and optimized URLs.
- Ensure support for both authenticated and public SEO-optimized pages.
- Implement cookie-less tracking in compliance with privacy standards.

11. Futureproofing

- Design architecture with modularity and adaptability for emerging technologies.
- Incorporate CI/CD pipelines for rapid, reliable deployments.
- Enable feature flagging and phased rollouts for new features.
- Support logical tenant separation for brand-specific modules and content.

12. Legal and Regulatory Requirements

- Implement support for consent capture, data retention policies, and user-initiated data deletion.
- Ensure compliance with applicable local and international digital laws.

13. Design Standards

- Follow a consistent design system and brand guidelines across all platforms.
- Implement dynamic and responsive UI that adapts to various screen sizes (desktop, tablet, mobile).
- Incorporate intuitive navigation, accessible interactions, and engaging user interfaces.

- Conduct iterative UX design validation through prototype testing and stakeholder feedback.
- Ensure consistency across platforms with a unified design system.
- Reinforce the mother-brand and sub-brand relationship throughout the user experience.
- Dynamic messaging should reflect the brand voice and be supported by content scheduling.
- Maintain a centralized brand documentation reference for logo usage, color systems, and tone of voice. (Brand guidelines will be provided).
- Personalization should enhance—not fragment—the brand’s visual identity across regions.

14. Infrastructure and Technology Architecture

- Use Microsoft Azure cloud infrastructure with scalability, high availability, and geo-redundancy.
- Leverage modern technology stacks including microservices, headless CMS, and hybrid mobile frameworks.
- Implement CI/CD pipelines, containerization, and API gateways to support continuous delivery.
- Ensure compliance with Wasl technology and enterprise architecture principles (SOA, modularity, security-by-design).
- Apply performance benchmarks for system response times and availability.
- Enable limited offline access to cached content and bookings, with sync upon reconnection.

15. Marketing Automation and CRM

- Define lifecycle triggers such as abandoned bookings, reward milestones, and more.
- Enable segmentation by loyalty tier, location, and transaction history.

- Backend tools must support campaign management without developer involvement.
- Include rules for suppression, frequency caps, and fallback messaging.
- Loyalty bonus campaigns should be behavior-based and support gamification.

16. General Framework Considerations

- Clearly distinguish global platform-wide features from vertical-specific modules in the solution design.
- Include success metrics and KPIs for each module.
- Ensure content and configuration strategies support centralized governance with localized execution.
- CMS must support multi-role content editing, preview, scheduling, versioning, and rollback.

Software Development Deliverables (Essential but not limited to):

Technical & Development Deliverables

- Full ownership of infrastructure, product code base with associated documentation
- Architecture overview with scalability and performance benchmarks
- Non-Functional Requirements (NFR) documentation
- API documentation including integration details and authentication methods
- Database schema documentation and data dictionary
- Source code handover checklist with versioning and repository details
- DevOps pipeline documentation including CI/CD workflow and rollback strategy
- Infrastructure and technology deployment blueprint
- Environment configuration guide for development, staging, and production
- Release management plan with versioning and rollback procedures

- Testing artifacts including unit, integration, UAT, regression, performance test cases and automated test reports
- UAT sign-off documentation
- Periodic Vulnerability Assessment Reports
- Audit trail or change log for code and infrastructure changes

Security, Compliance & Monitoring

- Security and compliance checklist (e.g., ISR, GDPR, PCI DSS readiness)
- Monitoring and reporting tool configurations
- Risk register and mitigation plan
- Compliance certification documents (if applicable)
- Consent and data privacy management documentation

UX, UI & Accessibility

- UX and UI design standards document
- Accessibility audit report and WCAG compliance status
- Localization and internationalization test plans
- SEO and performance optimization reports

Project Governance & Management

- SLA-based support and maintenance plan
- Project management plan with timeline, milestones, and delivery checkpoints
- Change request log with impact assessment
- Knowledge transfer plan with session details and documentation
- Post-deployment support playbook with escalation matrix
- KPI and analytics tracking framework (e.g., GA, Firebase, etc)

Training & Operational Readiness

- Admin and operations manual for backend users
- End-user training materials (manuals, videos, onboarding guides)
- CRM, Deeplinking and marketing automation configuration guide

Definitions

Term	Description
Viya	A lifestyle, loyalty, and services platform offering bookings, rewards, and integrated experiences across Dubai Golf and its partner businesses
Viya Backend Portal	The Viya Backend Portal is a centralized administrative platform to be developed by the vendor for managing all business operations, content, configurations, integrations, and reporting related to the Viya ecosystem. It serves as the control center for administrators, enabling seamless backend management of the Viya Mobile App, Partner App, and Website.
Viya Partner Portal	The Viya Partner Portal is a dedicated web-based platform developed by the Viya internal team for partner self-care as well as integration with third party golf systems and activity providers.
Access Pass	A membership product offering access to gyms, pools, beaches, and entertainment venues under Viya.
Tee Sheet	A scheduling system used by golf courses to manage tee time bookings and availability.

OTP (One-Time Password)	A temporary password used for validating mobile numbers or emails during registration/login.
LMS (Loyalty Management System)	A backend system that manages points, tiers, and loyalty rules.
CRM (Customer Relationship Management)	A platform used to manage customer interactions, track communication, and drive engagement.
CMS (Content Management System)	A tool used to manage app/web content such as banners, promotions, text, and media.
POS (Point of Sale)	System used at outlets to process transactions including F&B, retail, and ticketing.
APM (Application Performance Monitoring)	Tools used to monitor and ensure application health, performance, and uptime.
UAT (User Acceptance Testing)	Final testing phase where end-users validate the system's functionality before go-live.
NPS (Net Promoter Score)	A customer loyalty metric measured via the question: "How likely are you to recommend us...?"
PAX Build	A version of the Viya Partner App optimized for POS terminals (e.g., Pax machines).
PIN	A 6-digit numeric code used by users for secure login and authorization.
QR Code	A scannable code used to identify users and provide access to their bookings or access passes.

Biometric Login	Authentication using fingerprint or facial recognition for secure access.
Deep Linking	Technology enabling links that take users directly to specific content within the app.
Dynamic Pricing	Pricing model that adjusts based on time, demand, user type, etc.
Waitlist	Function that lets users queue for slots/times that are currently full, getting notified if they open.
Concept	A third-party system used for managing golf tee times, bookings, and club operations.
BIN-based Offers	Promotions applied based on the Bank Identification Number (first 6 digits of card).
Referral Program	A marketing mechanism to reward users who refer others to use Viya services.
Hybrid Framework	A mobile app architecture that allows using web technologies inside native containers.
GenAI (Generative AI)	AI-based technology that powers smart features like conversational booking, search, and chatbots.
Wikit	A venue or brand under Viya offering sports and recreational activities.
Topgolf	An entertainment venue combining driving range golf with food, music, and events, integrated into Viya.

API (Application Programming Interface)	A communication protocol that allows different systems to interact or exchange data.
CI/CD (Continuous Integration/Continuous Deployment)	Development practices used for frequent software releases and automation.
Super App	A single mobile application that integrates multiple services (e.g., booking, payments, loyalty, etc.).
Headless CMS	A content management system that provides content via APIs, decoupled from the frontend.
Heatmap	A visual representation showing where users interact most within an app or website.
Slot Activation	Rule defining when a booking or match becomes available to members or non-members.
ERP (Enterprise Resource Planning)	Business management software that integrates HR, finance, inventory, etc.
SSO (Single Sign-On)**	A login method allowing users to access multiple related services using one set of credentials.
